

OLI™

VIRTUAL GUARD TECHNOLOGY

VIRTUAL GUARD TECHNOLOGY

The OLI™ technology is a hardware agnostic software designed to improve the productivity of Security Professionals through the use of proactive detection and digital capabilities.

The Virtual Guard Technology (VGT), creates a verified, and auditable medium to drive conventional patrolling without physically walking the grounds.

This technology can be deployed both on premise and applied remotely.

BENEFITS OF VIRTUAL GUARD TECHNOLOGY

75% **Reduction in Manhours
Required to perform Patrol**

With the implementation of OLI, the Virtual Patrol feature immediately reduces the total manhours required. Effectively freeing up manhours to be repurposed.

**Total Duration required to
generate a patrol report**

5_{sec}

Complete with an audit trail of all responses captured by the operator together with relevant qualitative feedback based on Point of Interests (POI)

4x

**Increase in Coverage using
Virtual Patrol Route definition**

Covering strategic areas with video surveillance hardware installed instead of relying on physical patrols which may have limitations.

**Increased efficiency of manhours
with Virtual Guard Patrol feature**

24
patrols

Virtual Patrol can be completed every hour without the worries of physical fatigue or stress

24_{hrs}

**Rapid Technological
Deployment Onsite**

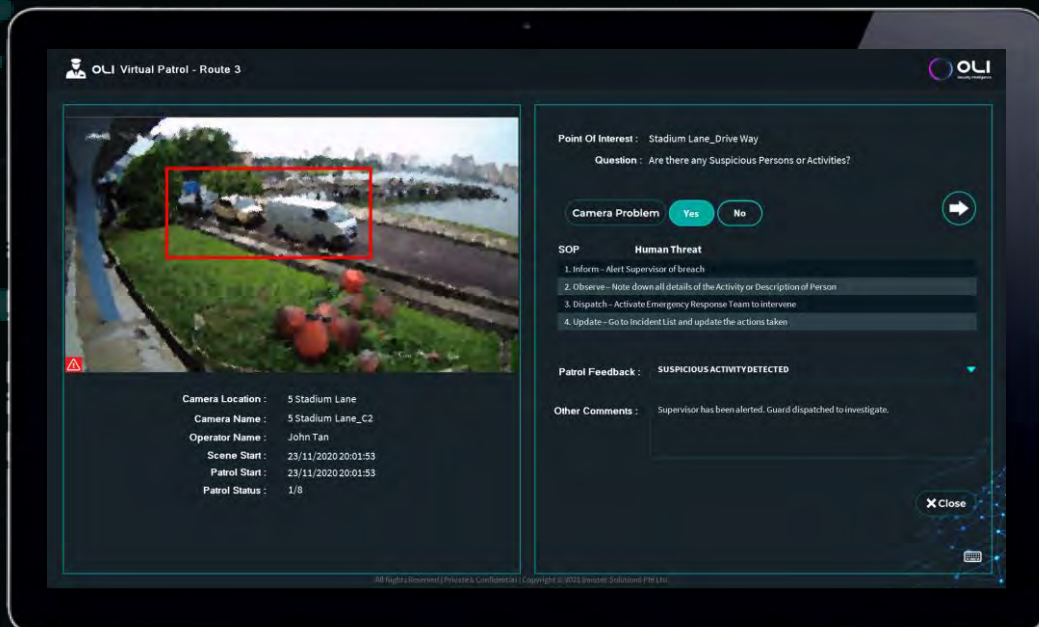

Easy to use and quick to integrate, simple configurations and setup can be made in quick time to deploy. Special customised deployments are also available.

TECHNOLOGY FOR PROFESSIONALS

Transform existing patrolling methods towards a digital detection. Using your existing infrastructure, the Virtual Guard Technology is quick to implement and intuitive to use.

The Virtual Guard Technology defines clear investigative parameters which channels the operatives' focus towards effective anomaly detection. Intuitive, bite size security protocols prompts itself upon the trigger of activity for operatives to intervene accordingly.

Data & Statistics**

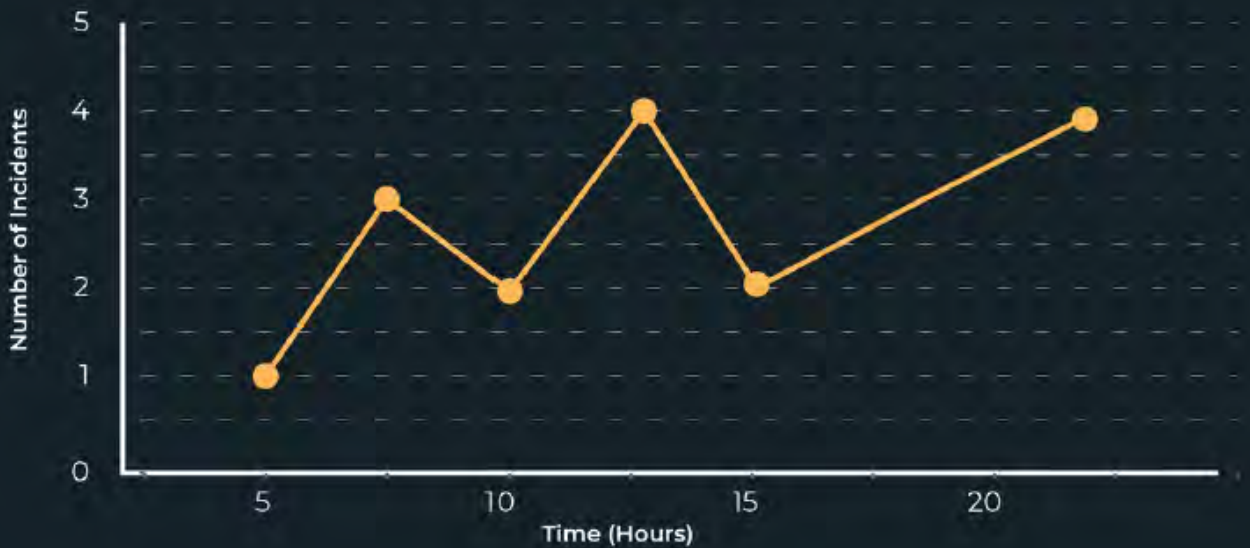

**Automatically Generate
Patrol Reports**

REAL-TIME INFORMATION DASHBOARD

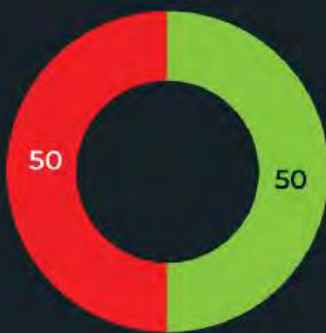

Significantly boost workflow efficiency and redeploy or reduce manpower. By integrating OLI Virtual Guard Technology into your existing infrastructure, the PRIME module allows for quick intuitive presentation of real-time statistics from the completion of Scheduled Patrols. Incident Reports are created simultaneously with every trigger captured by Virtual Patrols or Video Analytics, effectively automating the report generation time.

SIMPLE CALCULATIONS

Manpower Cost = ~\$5,000 per pax
Total Working Hours per Month = 192 hours

Cost Per Hour = \$5,000 / 192 hours = \$26

3 hours per day saved with Virtual Patrol = \$26 x 3 hours = \$78

\$78 per day x 30 days = \$2,340 per month to be repurposed

VALUE ADDED SERVICES PROVIDED

SITE SECURITY AUDIT

A complimentary re-evaluation of the areas of concern and problem statements of your site with the help of our experts

EQUIPMENT DIAGNOSTICS

We will perform a system diagnostics for your existing hardware to ensure the integrity of your infrastructure

SYSTEM INTEGRATION

If you require a refreshment or upgrade of your security infrastructure, we provide end-to-end solution based on your needs

REQUIREMENTS FOR DEPLOYMENT

OLI SOFTWARE

Provisioned with configurations based on site requirements and layout, total number of cameras, patrol route definition

OLI STREAMING DEVICE

Singular 64 channel Network Video Recorder to be deployed for OLI VGT to process the selected footages to form the patrol route

ON PREMISE TERMINAL

Optional to purchase, minimum specifications will be provided for client to procure the terminal on their own or repurpose existing ones

ADDITIONAL MODULES

The OLI™ Technology serves as a modular platform where a variety of components which can be integrated as is. With the same backbone across solutions, the technology is able to customise its offerings to best suit your needs.
